JOSÉ ALEJANDRO TÉLLEZ PRADA

Full-Stack Developer | AI Agent Orchestration & Automation

Bucaramanga, Colombia | joseale2006@gmail.com
joserraldo.github.io | github.com/Joserraldo | LinkedIn

Full-stack developer and Systems Engineering student (GPA 4.61/5.0), founder of Calaut.pro and winner of the UNAB Venture Challenge 2026. I plan the architecture, split the work into scoped tasks for AI agents, and review what they ship through types, tests and CI. Open to remote roles, internships and freelance projects, in Colombia or the U.S.

AI & AGENT ORCHESTRATION

Agent Workflows, Models & ML · Daily practice across my projects — 2026 – Present

- Run daily development on Claude Code and Hermes Agent, with subagents and a curated library of 130+ reusable skills for deploys, QA, audits and documents, so repeat work follows a tested procedure.
- Lower token spend by giving each job the cheapest capable model (log reading goes to Haiku subagents), trimming context and using CDM structured outputs (strict JSON schema) instead of long prompts.
- Trained and deployed ML models end to end: YOLOv8n egg-defect detector (Colab, FastAPI on EC2, Expo app), MobileNetV2 keypoint model and an MNIST CNN.

CDE Conecta: Agent-Powered CRM · Winner, UNAB Venture Challenge 2026 · cdeunab.lat — Oct 2026

- Won 1st place among 5 teams, and a 50% tuition scholarship for each of the 4 members, by shipping in 25 hours a multi-tenant CRM that replaces the 30-sheet Excel workbook of UNAB's Business Development Center (CDE), which will now implement it.
- Cut LLM usage nearly 200x (about 280 vs. 55,000 tokens per question, measured by the team on the test workbook) by designing an LLM router that reads only the question or column headers and returns a short decision, while 4 specialist agents do the work.
- Made the router reliable, with 7 of 7 correct routes in production tests at about 2 s each, by comparing providers (Qwen about 2 s vs. DeepSeek 4–8 s with errors) and combining strict JSON schema, zod, a confidence threshold, one retry and fallback rules.
- Built 3 of the 4 specialists (Vita, Nova, Lumi) plus the analytics: Nova picks from whitelisted indicators so the model never writes SQL, and Lumi's drafts wait for human approval.
- Shipped as 1 of 4 developers, each directing a Claude Code agent, across 162 commits and 70+ pull requests, using folder ownership, staggered 30-minute syncs and auto-merge behind CI.

URBAN MOBILITY PLATFORM

BUCARATRANSIT: Mobility Solution for Bucaramanga · Co-developer, team of 3 · bucaratransit.duckdns.org — 2026 – Present

- Designed the pivot from a campus bus tracker to a multi-tenant SaaS where each transit company operates separately, with live buses, routes, prepaid wallet and QR fares on Android and iOS (Kotlin Multiplatform, Laravel 12).
- Enabled cashless fares with no extra hardware through a double-entry wallet ledger and single-use HMAC-SHA256 QR codes that expire in 60 s, turning the driver's phone into the terminal; validated by the team with 88 automated tests.

EXPERIENCE

Founder & Lead Developer · Calaut.pro · calaut.pro — Nov 2025 – Present

- Built a multi-tenant B2B scheduling SaaS for 4 industries, running on 43 Cloud Functions and 25 rule-protected data paths, by isolating tenants with custom claims and confining critical writes to the Admin SDK.
- Automated the path from booking to 24-hour reminder with no manual steps by building two-way Google Calendar sync and WhatsApp/email messaging; a data-migration agent based on CDE Conecta is in development.

Freelance Software Developer · Custom software for small businesses · Hidrolavados — Dec 2023 – Present

- Rebuilt a Kärcher Gold Partner shop's site as a platform with catalog, rentals, repair tracking and photo receipts (Next.js, Firebase, Supabase).
- Developing OdontoManager, an offline Windows app (Tauri, Rust, SQLite) replacing a legacy dental-office system, with automatic backups and tested billing rules; a Next.js platform for INMAS de Colombia; and the K-Skin and Bordados Zapatoca stores with WhatsApp checkout.

J-1 Cultural Exchange, Attractions & Operations · Walt Disney World, FL — May – Aug 2026

- Served high daily guest volumes in English across 4 attractions (Indiana Jones Epic Stunt Spectacular, Olaf's Celebrity Spotlight, Mickey Shorts Theater, Red Carpet Dreams), with fast teamwork.

SKILLS & OTHER PROJECTS

- **AI & automation:** Claude Code, Hermes Agent, subagents, skills, n8n, LLM routing, CDM structured outputs, token optimization, model training
- **Languages:** TypeScript, JavaScript, Python, Kotlin, PHP, Java, SQL **Web:** React, Next.js, Node.js, Laravel, FastAPI, Tailwind
- **Cloud & data:** Firebase, Azure, AWS, Docker, PostgreSQL, Firestore, Supabase **ML:** TensorFlow, PyTorch, YOLO, MediaPipe
- **Also built:** Mano Musical (MediaPipe air piano with polyphonic audio); Factory OS (Colombia 5.0 hackathon); Nexia+ (foundation hackathon); fleet of 10 devices on Azure IoT Central.

EDUCATION & ACTIVITIES

- **B.S. Computer Systems Engineering**, Universidad Autónoma de Bucaramanga (UNAB), expected 2028. GPA 4.61/5.0.
- **English** B2+ (TOEFL Junior 895/900), **Spanish** native. UNAB competitive programming team (ACIS/REDIS contests); student mentor and speaker, 2024–2025.
- **Taekwondo black belt:** represented UNAB, Santander and Colombia. My black-belt project on how taekwondo helps children at school got the sport adopted at my childhood school.
